The struggle of bringing this monster to life on the screen was considerable and caused Boris Karloff to lose 20 pounds over the six weeks it took to film Frankenstein. His day started with a five hour make-up application. He wore 30 pound boots to increase his height to seven feet six inches along with steel struts on his legs to give him the signature lurching walk. One scene strained Karloff so much that he was hospitalized for back problems.

At the end of the day it took two hours to remove his make-up. Even with all this, Karloff called the Monster his favorite film role. He was identified with the Monster for the rest of his life.
